OBJECTIVE

To achieve success by creating a balance between all the six spheres of life i.e. official, personal, health, wealth, social and spiritual and to capitalize my skills for the overall development of myself and my organization as a whole.

EDUCATION

B.Sc | Guwahati College

2005 – 2008

EXPERIENCE

Front End Developer | Harman Connected Services

2015 – TILL DATE

- Responsible for Front End Development.
- Responsible for developing client specific UI and meet deadlines for completion.
- Have already received two Extra Mile Award for efforts in the Toyota Telematics Project I was involved in.
- Responsible for integration of the UI with the back-end. Once integrated, lead the debugging process to debug any inconsistencies arising.

Team Lead | Weberex

2011 – 2015

- Understanding the client's requirements and leading the design team to meet the requirements (Design & Code related).
- Delegating various tasks to respective team members.
- Quality Checking/Troubleshooting for various bugs, broken links, design issues related to the overall process of Web Design & Development.
- Completing the projects in time and uploading the same on the server and check for further issues.
- Responsible for maintenance of the client websites.
- Designing and developing Client design requirements.
- Making wire frame of the website as requested by the client.
- Work on the wire frame and develop a design template of the website in Photoshop.
- Work according to the template and do the necessary coding.
- Develop the design by coding.
- Check for functionality issues and rectifying as needed.

SKILLS

- **Angular 4.x.x** – Components, Routing, Pipes, Injectables, Observables, Switch, Arrays, FormGroup, FormControl, FormArray, FormBuilder, Validators, ngStyle, Conditional Class binding, ngIf, Auth Guard, ngFor looping, ngModel (One and Two way binding), rxjs, Services, Reusable Components, Object Oriented Programming using Typescript, Bundling & Deployment.

- **HTML** – HTML5 tags (header, nav, article, aside, audio, video, canvas, footer, etc...), HTML5 form validation technique by using 'required' attribute, defining states of various page elements, aria-labels, placeholder actions – 'onfocus', 'onblur', responsive design coding as well as cross browser compatible, table-less design coding.

- **CSS** – Regular CSS properties and CSS3 properties like transform, transition, animation keyframes, media queries, border-box, pseudo elements, working with child elements, working with background gradients, CSS3 Flexbox etc...

- **Javascript** – Concepts like 'prototype, callback functions, inheritance, console debugging, event phases, slice & splice method, selecting random array elements, .push() method, .pop() method, hoisting'.

- **jQuery** – Manipulating page elements using jQuery to get the desired result, using jQuery methods like 'click, delay, slide, slideToggle, addClass, removeClass, fadeIn, fadeOut, toggleClass,'etc...

- **jQueryUI** – Functions like '.dialog, .draggable, .droppable, .accordion, .menu, .progressbar, .tooltip, etc...'

- **Bootstrap** – Experience in working with Bootstrap classes and modifying/adding custom classes as and when required.

- **AngularJS** –Comfortable working with basic stuff like 'ng-click, ng-model, ng-disabled, ng-focus, ng-hide, ng-show, ng-repeat etc...'

- **UI Framework** – Angular Material, Semantic UI for Angular 2+.

- **CMS** - Working knowledge of Wordpress, Joomla, PrestaShop.

PROJECTS

- **IRI workBench** (Harman Connected Services, January 2017 – till date) – Currently working as the Lead UI Developer, responsible for building the entire information flow keeping user perspective in mind. The project is the migration of legacy desktop application to the web format. Using the latest Angular 2 framework to build the app.

- **IRI Media Lift** (Harman Connected Services, August 2016 – December 2016) – Working as the Lead UI Developer, developing a portal consisting of about 25-30 pages. Primarily the layout

is Bootstrap and framework is AngularJS. I am responsible for the overall complexity as well as balancing of the layout. The layout is built with Bootstrap classes with some custom classes thrown in. I have implemented jQuery also to control some behavior.

- **Toyota Telematics Cloud** (Harman Connected Services, Jan 2016 – July 2016) – Worked as the Lead UI Developer, developing complex UI functionalities as per Client requirement. Coding involved basically HTML, CSS, jQuery and Javascript. Built some complex UI like a Survey Question Builder, a Mobile View Emulator and 4 steps Wizard layout.

- **Sample App Project** – Developed a sample Angular 4.x.x project for demonstration purpose only. Can be viewed by visiting 'www.technotuts.xyz/src'. Please provide the below mentioned details to log in:
